

SAN JOSE DIRIDON STATION

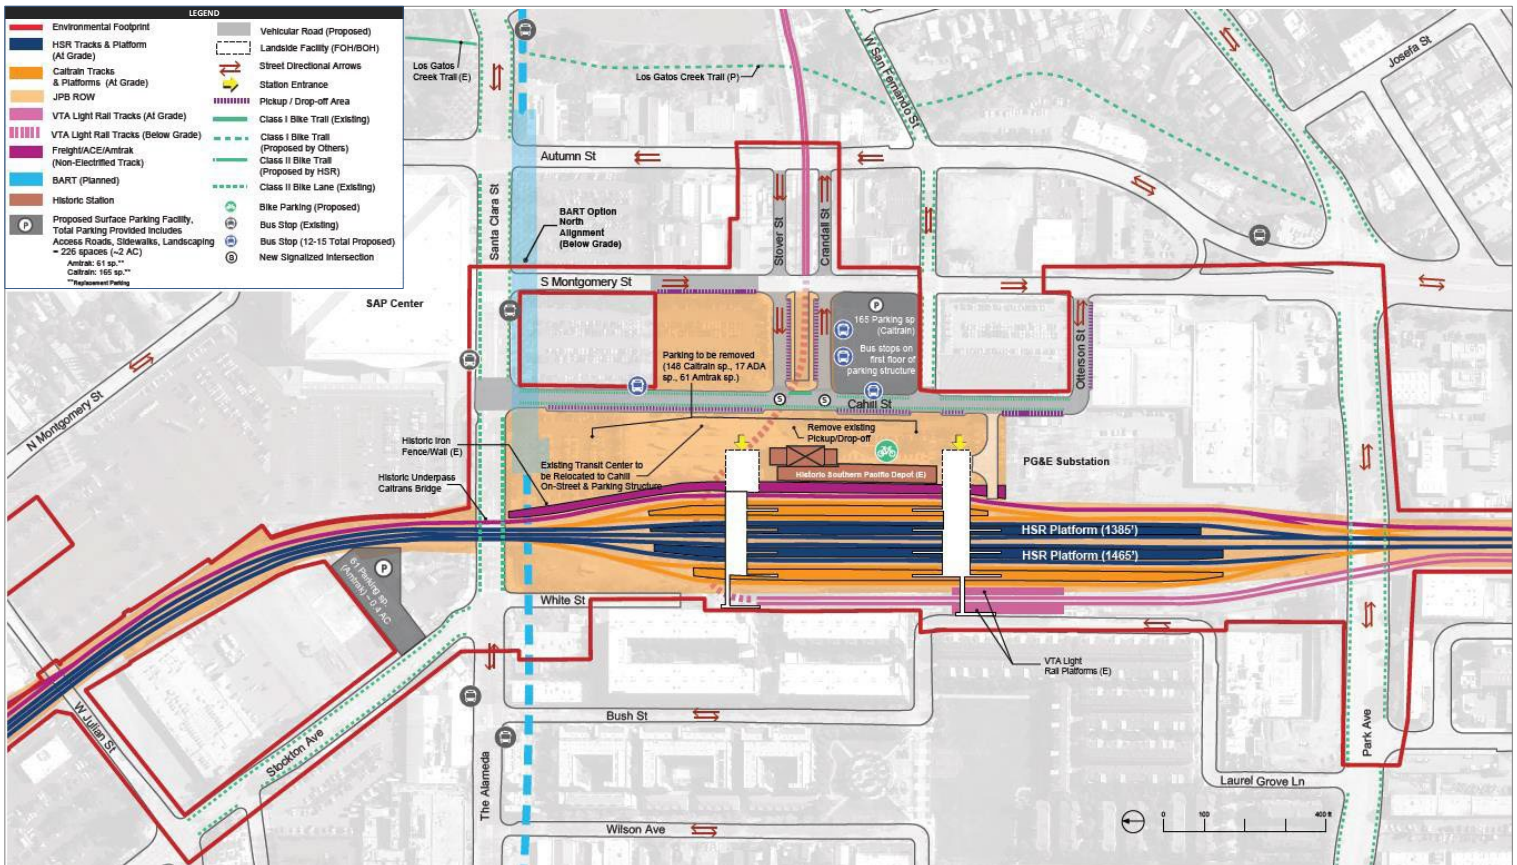

High-Speed Rail Station Modifications

On April 28, 2022, the Authority's Board of Directors certified the Final EIR/EIS and approved the Preferred Alternative for the San Jose to Merced Project Section, which includes an at-grade high-speed rail station design at San Jose Diridon Station.

The approved alternative will result in relatively small changes to the station to allow for high-speed rail service. The historic train station would remain in place. Station updates would include the following:

- Modification of two existing platforms to accommodate high-speed rail trains
- Addition of up to two pedestrian concourses to access the high-speed rail and Caltrain platforms
- Access improvements around the station

Additional planning efforts are underway to develop a bigger vision for how Diridon Station can function as a revamped intermodal hub. For more information on the Diridon Integrated Station Concept Plan, visit www.DiridonSJ.org.
